AI Fundamentals Explained in Fifty Papers

Jonathan Y. Ma

Contents

1 The Big Picture **5**
- 1.1 Computing Machinery and Intelligence . . . 5
- 1.2 Deep Learning . . . 5
- 1.3 Is It Enough to Get the Behaviour Right? . . . 5

2 First Networks **5**
- 2.1 The Perceptron . . . 5
- 2.2 Learning Representations by Back-Propagating Errors . . . 5
- 2.3 Backpropagation Applied to Handwritten Zip Code Recognition . . . 5
- 2.4 Long Short-Term Memory . . . 5
- 2.5 A Deep Probabilistic Language Model . . . 5

3 Words as Numbers **5**
- 3.1 Efficient Estimation of Word Representations in Vector Space . . . 5

4 Going Deep **5**
- 4.1 Deep Sparse Rectifier Neural Networks . . . 5
- 4.2 Dropout: A Simple Way to Prevent Neural Networks from Overfitting . . . 5
- 4.3 ImageNet Classification with Deep Convolutional Neural Networks . . . 5
- 4.4 Adam: A Method for Stochastic Optimization . . . 5
- 4.5 Batch Normalization . . . 5
- 4.6 Deep Residual Learning for Image Recognition . . . 5

5 From Translation to Transformers **5**
- 5.1 Sequence to Sequence Learning with Neural Networks . . . 5
- 5.2 Neural Machine Translation by Jointly Learning to Align and Translate . . . 5
- 5.3 Neural Machine Translation of Rare Words with Subword Units . . . 5
- 5.4 Attention Is All You Need . . . 5

6 The First Pre-Trained Transformers **5**
- 6.1 Improving Language Understanding by Generative Pre-Training . . . 5
- 6.2 BERT: Pre-Training for Language Understanding . . . 5
- 6.3 Language Models Are Unsupervised Multitask Learners . . . 5

7 Scaling Up **5**
- 7.1 The Bitter Lesson . . . 5
- 7.2 Language Models Are Few-Shot Learners . . . 5
- 7.3 Scaling Laws for Neural Language Models . . . 5
- 7.4 Training Compute-Optimal Large Language Models . . . 5

8 Deep Reinforcement Learning **5**
- 8.1 Human-Level Control through Deep Reinforcement Learning . . . 5
- 8.2 Mastering the Game of Go with Deep Neural Networks and Tree Search . . . 5
- 8.3 Deep Reinforcement Learning from Human Preferences . . . 5

9 From Model to Assistant **5**
9.1 Training Language Models to Follow Instructions with Human Feedback . . 5
9.2 Direct Preference Optimization: Your Language Model Is a Reward Model . 5
9.3 Chain-of-Thought Prompting Elicits Reasoning in Large Language Models . 5
9.4 Retrieval-Augmented Generation for Knowledge-Intensive NLP Tasks 5
9.5 ReAct: Synergizing Reasoning and Acting in Language Models 5
9.6 Why Language Models Hallucinate 5

10 Reasoning Models **5**
10.1 DeepSeekMath 5
10.2 DeepSeek-R1: Incentivizing Reasoning Capability in LLMs via RL 5
10.3 s1: Simple Test-Time Scaling 5

11 Images, Generation, and Science **5**
11.1 Generative Adversarial Nets 5
11.2 Denoising Diffusion Probabilistic Models 5
11.3 High-Resolution Image Synthesis with Latent Diffusion Models 5
11.4 An Image Is Worth 16x16 Words: Transformers for Image Recognition at Scale 5
11.5 Learning Transferable Visual Models from Natural Language Supervision . . 5
11.6 Highly Accurate Protein Structure Prediction with AlphaFold 5

12 Under the Hood **5**
12.1 Distilling the Knowledge in a Neural Network 5
12.2 Quantization and Training of Neural Networks 5
12.3 LoRA: Low-Rank Adaptation of Large Language Models 5
12.4 FlashAttention: Fast and Memory-Efficient Exact Attention with IO-Awareness 5
12.5 Efficient Memory Management for LLM Serving with PagedAttention 5
12.6 Switch Transformers: Scaling to Trillion Parameter Models 5

1 The Big Picture

1.1 Computing Machinery and Intelligence (Link)

1.2 Deep Learning (Link)

1.3 Is It Enough to Get the Behaviour Right? (Link)

2 First Networks

2.1 The Perceptron (Link)

2.2 Learning Representations by Back-Propagating Errors (Link)

2.3 Backpropagation Applied to Handwritten Zip Code Recognition (Link)

2.4 Long Short-Term Memory (Link)

2.5 A Deep Probabilistic Language Model (Link)

3 Words as Numbers

3.1 Efficient Estimation of Word Representations in Vector Space (Link)

4 Going Deep

4.1 Deep Sparse Rectifier Neural Networks (Link)

4.2 Dropout: A Simple Way to Prevent Neural Networks from Overfitting (Link)

4.3 ImageNet Classification with Deep Convolutional Neural Networks (Link)

4.4 Adam: A Method for Stochastic Optimization (Link)

4.5 Batch Normalization (Link)

4.6 Deep Residual Learning for Image Recognition (Link)

5 From Translation to Transformers

5.1 Sequence to Sequence Learning with Neural Networks (Link)

5.2 Neural Machine Translation by Jointly Learning to Align and Translate (Link)

5.3 Neural Machine Translation of Rare Words with Subword Units (Link)
